

ABSTRACT OF THE DISCLOSURE

According to the present invention, a shaving apparatus handle includes an interior cavity, a housing, and an actuator. The interior cavity has a first end and a second end lengthwise, and is operable to store flowable shaving aid material. The housing is mounted on the handle and includes one or more ports in fluid communication with the contents of the interior cavity. The actuator is disposed within the interior cavity and includes a ratchet mechanism, a button, and a piston. The ratchet mechanism and the button are operable to work in concert to move the piston uni-directionally toward the second end of the interior cavity. The movement of the piston causes the flowable shaving aid material to be dispensed from the handle adjacent a razor cartridge.
